

Staircase to the Moon

Question 37: The Staircase to the Moon is described as an optical illusion. This means it is

- a) a beautiful, rare and unusual sight.
- b) an unchallenged acceptance that "seeing is believing".
- c) visually deceptive or misleading.
- d) a misunderstanding of a factual explanation.

Question 38: The Staircase to the Moon can be seen

- a) when the full moon is high in the sky.
- b) during an early evening when the tide is high.
- c) in any direction across Roebuck Bay at low tide.
- d) when the tide is out and the full moon is rising.

Question 39: A natural phenomenon is

- a) a natural event in the physical sense and, therefore, not formed by humans.
- b) an event created by people using natural, raw materials.
- c) any startling, frightening or unexplained natural occurrence.
- d) an unpredictable, unexpected and beautiful experience.

Question 40: To see the Staircase to the Moon, people have to be in Broome

- a) at low tide any month after October.
- b) by moonrise on three evenings in the months from March to October.
- c) most evenings in March or October.
- d) any three nights when there is a full moon in the east.
