

Star signs

Astrology is the study of the positions of the moon, sun and planets in the belief that their motions affect human beings. A person's star sign is determined by their birth date. There are twelve star signs that roughly correspond to monthly periods.

Here is advice for four star signs for the first day in December.

Libra (scales), 24 September – 23 October

Turn up your assertive nature in relation to your life. You may find that a small spark is all that is needed to rekindle a smouldering fire of ambition. You may be going through rough times right now when it comes to this area of your life. If this is so, consider all options, and don't shy away from hard work. You may have to change your study habits to have any real success.

Taurus (bull), 21 April – 20 May

Start planning a trip with close friends. A long break from your studies may be just what is needed to put a bit of drive into your daily life. Those of you who live in an isolated place may find that going on a foreign adventure will result in meeting interesting people with similar backgrounds. Broaden your horizons and look towards new ways of thinking and planning. Avoid arguments with friends.

Aquarius (water bearer), 21 January – 19 February

There may be a great change in your fortunes today, but you may be a bit unsure of how to react to the unexpected. Get up and do some exercise. Give your body the workout it needs. Remember what it is like to sweat. You will feel much more confident afterwards. You will be much more likely to continue down a healthy track if you start pushing your body to its physical limits. Beneficial colours are pale rose and aqua.

Scorpio (scorpion), 24 October – 22 November

Today is a very powerful day for Scorpios. You may find yourself going to extremes in certain areas of your life, especially when it comes to taking risks. You may find yourself being torn between thrills and common sense. You will be up one minute and down the next. Try to find a balance in this game of yo-yo. Lucky numbers are 4 and 16.
